Power Supply and Wiring · Connect lightings and I/O lines first, then supply voltage source. (\*)Operation and Display If surge currents are present in the power lines, connect surge absorbers that suit the operating environment. Before turning ON the power after the product is connected, make sure that the power supply voltage is correct, there are no incorrect connections (e.g. load short-circuit) and the load current is appropriate. Incorrect wiring may result in break down of the product. (8) Digital display · Use FL-XC cable to extend the cable length between lightings and lighting controller. FL-XC can be used only one unit at the same time. Do not connect FL-XC and FL-XC each other. 8.8.8 3 Maintenance and inspection · Prevent from high pressure instruments and driving machines for safty of operation and maintenance.
