

When power is on, do not touch the terminals. Doing so can cause an electric shock or malfunction When disposing of the product, handle it as industrial waste Connect the battery correctly. Do not discharge, disassemble, heat, short, solder or throw the battery into the fire. Incorrect handling may cause the battery to generate heat, burst or take fire, resulting in injuries or fires. Before starting cleaning or terminal screw retightening, always switch off the power externally in all phases. Not switching the power off in all phases can cause a unit failure or malfunction. Undertightening can cause a short circuit or malfunction. Overtightening can cause a short circuit or malfunction due to the damage of the screws or unit. TARTUP/MAINTENANCE RECAUTIONS Do not disassemble or modify the unit. Doing so can cause a failure, malfunction, injury or fire Do not touch the conductive and electronic parts of the unit directly Doing so can cause a unit malfunction or failure.

- The cables connected to the unit must be run in ducts or clamped. Not doing so can cause the unit or cable to be damaged due to the dangling motion or accidental pulling of the cables or can cause a malfunction due to cable connection fault.
- When unplugging the cable connected to the unit, do not hold and pull the cab portion. Doing so can cause the unit or cable to be damaged or can cause malfunction due to a cable connection fault.

1. Features

1) Improved monitoring performance and connectivity to FA devices

display section, which may cause a touch switch to operate. Note that the following occurs on the GOT when the backlight goes out.

The POWER LED flickers (green/orange) and the monitor screen appel blank

High speed monitoring through high speed communication at maximum of 115.2kbps.

Multiple languages are displayed using the Unicode2.1-compatible fonts and beautiful characters are drawn using the TrueType and high quality fonts High speed display and high speed touch switch response

2) More efficient GOT operations including screen design, startup, adjustment, management and maintenance works
 The 3MB user memory is included as standard.

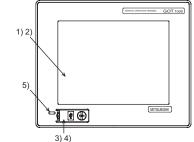

Font installation is available to increase the system fonts.

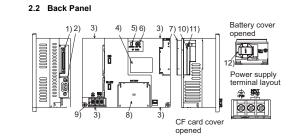

3) Enhanced support of FA setup tools

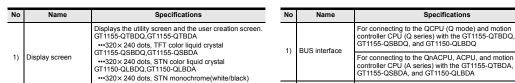

Transfering or monitoring the sequence programs using the personal computer connected to GOT, during direct connection to Q, QnA or A series programmable
 Transfering Or monitoring the sequence programs using the personal computer connected to GOT, during direct connection to Q, QnA or A series programmable
 The USB connector is positioned on the GOT front. This enables the system startup to be performed more efficiently using FA device setup tool, and eliminates the indirect works (opening and closing the control panel, cable replacement, cable rewiring) in order to improve the working efficiency.

|--------|---|---|
| | | When transporting lithium batteries, make sure to treat them based on the transport regulations. |
| | | Before transporting the GOT, turn the GOT power on and check that the battery voltage status is normal on the Time setting & display screen (utilities screen). In addition, confirm that the adequate battery life remains on the rating plate. Transporting the GOT with the low battery voltage or the battery the reached battery life may unstabilize the backup data unstable during transportation. |
| | | · Make sure to transport the GOT main unit and/or relevant unit(s) in the manner |

anne Make sure to tarisport the GOT main tank and/or relevant unit(s) in the mainte they will not be exposed to the impact exceeding the impact resistance described in the general specifications of this manual, as they are precisio devices. Failure to do so may cause the unit to fail. Check if the unit operates correctly after transportation.

3.4 Power Supply Specifications

| | | Specifications | | | | |
|---|---|--|-----------------------------|--|--|--|
| Item | GT1155-QTBDQ | GT1155-QSBDQ | GT1150-QLBDQ | | | |
| | GT1155-QTBDA | GT1155-QSBDA | GT1150-QLBDA | | | |
| Input power supply voltage | 24VDC (+10% -15%), ripple voltage 20 | 00mV or less | | | | |
| Fuse (built-in, not exchangeable) | 1.0A | | | | | |
| Power consumption | 11.16W (465mA/24VDC) or less | 9.72W (405mA/24VDC) or less | 7.92W (330mA/24VDC) or less | | | |
| At backlight off | 5.04W (210mA/24VDC) or less | | | | | |
| Inrush current | 26A or less (26.4V) 4ms | | | | | |
| Permissible instantaneous power failure time*1 | Within 10ms | | | | | |
| Noise immunity | Noise voltage: 500Vp-p, Noise width: 1 µs (by noise simulator of 25to 60Hz noise frequency) | | | | | |
| Dielectric withstand voltage*2 | 500VAC for 1 minute (across power supply terminals and earth) | | | | | |
| Insulation resistance*2 | 10MΩ or larger by a 500VDC insulation | resistance tester (across power supply ter | minals and earth) | | | |
| Applicable wire size | 0.75 to 2[mm ²] | | | | | |
| Applicable solderless terminal | Solderless terminal for M3 screw RAV1 | .25-3, V2-N3A, FV2-N3A | | | | |
| Applicable tightening torque (Terminal block terminal screw) | 0.5 to 0.8[N•m] | | | | | |

The GOT continues to operate even upon 5ms or shorter instantaneous power failure. The GOT stops operating if there is extended power failure or voltage drop, while it automatically resumes operation as soon as the power is restored.

*2 A surge absorber is connected between the power supply and earth terminal so that the GOT does not malfunction due to applied lightning surge noise. Values without a surge absorber are described for the dielectric withstand voltage and the insulation resistance.

3.5 External Dimensions

4. EMC and Low Voltage Directive

ance to the EMC Directive, For the products sold in European countries, the conformance to the EMC Direct which is one of the European Directives, has been a legal obligation since 1996. Also, conformance to the Low Voltage Directive, another European Directives, has been a legal obligation since 1997

Manufacturers who recognize their products must conform to the EMC and Low Voltage Directive are required to declare that their products conform to these Directives and put a "CE mark" on their products.

For the EMC and low voltage directives conformance method for the GOT1000 series, refer to the GT11 User's Manual. The above manual can be downloaded from the Information site for Mitsubishi lustrial automation products MELFANS

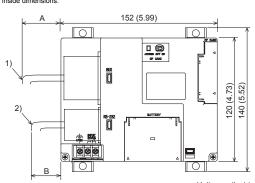

Also, conformance to the EMC Directives of the GOT1000 series can be confirmed with the MELFANSweb website. For latest information, please confirm on the MELFANSweb website. (MELFANSweb website: http://wwwf2.mitsubishielectric.co.jp/english/index.html)

Mithubishi GOTs conform to the following standards:

EN61131-2: 2003 Programmable controllers-Equipment requirements and tests

5. Installation

5.1 Control Panel Inside Dimensions for Mounting GOT Mount the GOT onto the control panel while considering the foll ng control panel

Unit: mm (inch)

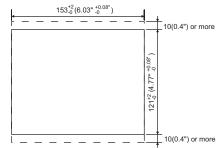

| | Model Name | Α | В |
|----|---|-----------|-----------|
| G | T1155-QTBDQ T1155-QSBDQ T1150-QLBDQ | 56 (2.21) | 40 (1.58) |
| G | T1155-QTBDA T1155-QSBDA T1150-QLBDA | 38 (1.50) | 40 (1.58) |
| No | | Name | |
| 1) | Bus connection cat | ble | |

2) Personal computer connection cable/bar code reader connection cable

Applicable cable Some cables may need to be longer than the specified dimensions when connecting to the GOT. Therefore, consider the connector dimensions and bending radius of the cable as well for installation.

5.2 Panel Cutting Dimensions

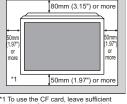

Make holes in the panel according to the dimensions list below Also, ensure 10mm spaces in upper and lower parts of the panel for mounting fixtures

Unit: mm (inch)

5.3 Mounting Position When mounting the GOT, the clearances shown on the right must be left from a structure or the other device. Secure 50mm (1.97") or more on the left, right and bottom sides of the GOT to structures or other devices

to structures or other devices. Secure 80mm (3.15") or more on the top of the GOT from structures or other devices to allow good ventilation If devices (such as a contactor) generating radiated noise or those generating heat are arranged around

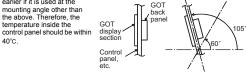

generating near are already of a transport of the GOT, secure 100mm (3.94") or more on the back panel. When using the CF card, secure a sufficient distance on the left side to allow installation and removal of the CF card. [Securing 100mm (3.94") or more is recommended.]

5.4 Control Panel Inside Temperature and Mounting Angle

When mounting the main unit to a control panel or similar, set the display section as shown below When the temperature inside the control panel is 40 to 55°C (Horizontal mount), 40 to 50°C (Vertical mount), the mounting angle should be in the range 60° to 105°

degrees The GOT will be deteriorated earlier if it is used at the mounting angle other than the above. Therefore, the

5.5 Installation Procedure

The GOT is designed to be embedded into a panel. Mount the GOT by following the procedure below. For panel cutting dimensions, refer to Section 4.2. Note that the panel thickness should be within 5mm.

1) Inserting into the panel face Insert the GOT from the front side of the panel.

2) Fixing the GOT Engage the hook of the mounting

fitting (accessory) to the unit fixing hole of the GOT and tighten the

screw until the GOT is fixed with the mounting bolt (accessory). The GOT will be fixed in 4 upper/

lower parts Tighten the mounting screw with the

(Failure to do so may distort the panel and make a surface waviness on the protective sheet.)

3) A protection film is attached on the display section of GOT prior to shipment Remove the film when the installation is completed.

6. Wiring

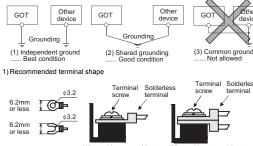

6.1 Power Supply Wiring

Connect the power terminal on the GOT rear face with the 24VDC terminal of the external power

Use 0.75mm² or more cables so as not to produce voltage drops Use solderless terminals for M3 screws, and be sure to tighten the screws with a tightening torque of 0.5 to 0.8N•m.

Use the cable of 2mm² or more for grounding. Set the grounding point closer to the GOT to make the grounding cable short as

7. Maintenance and Inspection

7.2 Periodic Inspection

۲

Yearly or half-yearly inspection items The following inspection should also be performed when equipment has been moved or modified or the wiring changed.

| No. | Inspection Item | | Inspection Method | Criterion | | Action |
|-----|-------------------------------|------------------------|---|---------------------|--------------|---|
| 1 | Surrounding environment | Ambient temperature | Make measurement with thermometer or hygrometer Measure corrosive gas | Display section | 0 to 50℃ | For use in control panel, temperature |
| | | | | Other portions | 0 to 55°C | |
| | | Ambient humidity | | 10 to 90%RH | | inside control panel is ambient temperature |
| | | Atmosphere | | No corrosive gas | | |
| 2 | Power supply voltage check | | 24VDC Measure voltage across terminals. | 20.4 to 26.4VDC | | Change supply power |

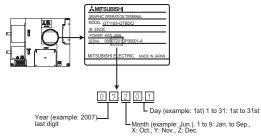

• How to confirm production year and

month

The production year and month of the battery built in the purchased GOT can be confirmed by the production No. (serial No.) marked on the GOT main unit.

Holder

Conn

 Battery life Approximate battery life: 5 years (ambient temperature: 25°C) [Guaranteed for 1 year] Battery replacement: In 4 to 5 years

Approximate life is 5 years, but life may be shorter depending on the ambient temperature, therefore, note that the battery must be replaced in 4 to 5 years. Make sure to purchase a new battery as needed as it self-discharges.

Battery status can be confirmed on a GOT utility screen For details of battery status or how to output alarm, refer to the following → GT11 User's Manual
