Safety Precaution (Read these precautions before use.)

This manual classifies the safety precautions into two categories:

DANGER and **ACAUTION**

() DANGER

Indicates that incorrect handling may cause hazardous conditions, resulting in death or severe injury

*∧***CAUTION**

Indicates that incorrect handling may cause hazardous conditions, resulting in medium or slight personal injuror physical damage

Depending on the circumstances, procedures indicated by ACAUTION may also cause severe injury

It is important to follow all precautions for personal safety.

How to obtain manuals

For product manuals or documents, consult with the Mitsubishi Electric dealer from who you purchased your product.

Applicable standards

FX3U-4DA-ADP units made in June, 2005 or later comply with the EC Directive (EMC Directive) and UL standards (UL, cUL). Further information can be found in the following manual

- → Refer to the FX3G Series Hardware Manual (Manual No. JY997D33401) → Refer to the FX3U Series Hardware Manual (Manual No. JY997D18801) → Refer to the FX3UC (D. DSS) Series Hardware Manual (Manual No.
- → Refer to the FX3UC-32MT-I T-2 Hardware Manual (Manual No. JY997D31601) Regarding the standards that relate to the main unit, please refer to either the FX series product catalog or consult with your pearest Mitsubishi product provider

Caution for EC Directive

The analog special adapters have been found to be compliant to the European standards in the aforesaid manual and directive. However, for the very best performance from what are in fact delicate measuring and controlled output device Mitsubishi Flectric would like to make the following points:

As analog devices are sensitive by nature, their use should be considered carefully. For users of proprietary cables (integral with sensors or actuators), these users should follow those manufacturers installation requirements

Mitsubishi Electric recommend that shielded cables should be used. If NO other EMC protection is provided, then users may experience temporary loss or accuracy between ±10% in very heavy industrial areas.

However Mitsubishi Electric suggest that if adequate EMC precautions are followed for the users complete control system, users should expect accuracy as enecified in this manual

- Sensitive analog cable should not be laid in the same trunking or cable conduit as high voltage cabling. Where possible users should run analog cables senarately
- . Good cable shielding should be used. When terminating the shield at Earth - ensure that no earth loops are accidentally created.
- When reading analog values EMC accuracy can be improved out by averaging the readings. This can be achieved either through functions on the analog special adapters or through a users program in the FX3U(C) Series

1. Outline

The FX3U-4DA-ADP adapter for analog output (hereinafter called 4DA-ADP) is a special adapter to add four analog output points.

1.1 Incorporated Items

Verify that the following product and items are included in the package:

1.2 External Dimensions, Part Names, and Terminal Layout

- [1] DIN rail mounting groove (DIN rail: DIN46277)
- [2] Name plate

[3] Special adapter slide lock:

Used to connect additional special adapters onto the left side of this special

- [4] Special adapter connector cover:
- Remove this cover to connect additional special adapters to the left side. [5] Direct mounting hole:2 holes of \$4.5 (0.18") (mounting screw: M4 screw)
- Not used when connecting to FX3UC Series PLC.
- [6] POWER LED (green):
 - Lit while 24V DC power is supplied properly to terminals '24+' and '24-'.
- [7] Terminal block (European type): Connect the analog output voltage/current signal, and 24V DC power supply
- [8] Special adapter connector:
- Used to connect this special adapter to PLC main unit or special adapter
- [9] DIN rail mounting hook
- [10] Special adapter fixing book
- [11] Special adapter connector
- Used to connect communication or analog special adapters to the left side of the 4DA-ADP.

2 Installation

For installation/uninstallation details, refer to the following manuals:

- → Refer to the FX3G Series User's Manual Hardware Edition
- → Refer to the FX3U Series User's Manual Hardware Edition. → Refer to the FX3UC Series User's Manual - Hardware Edition

INSTALL ATION **DANGER** PRECAUTIONS

Make sure to cut off all phases of the power supply externally before attempting installation or wiring work

Failure to do so may cause electric shock or damage to the product.

INSTALLATION DDEC ALITIONS

↑CAUTION

- Use the product within the generic environment specifications described in PLC main unit manual (Hardware Edition).
- Never use the product in areas with excessive dust, oily smoke, conductive dusts corrosive gas (salt air, Cl₂, H₂S, SQ₂, or NQ₂), flammable gas, vibration or impacts or expose it to high temperature condensation or rain and wind If the product is used in such conditions, electric shock, fire, malfunctions deterioration or damage may occur
- When drilling screw holes or wiring, make sure cutting or wire debris does no enter the ventilation slits
- Failure to do so may cause fire, equipment failures or malfunctions.
- Do not touch the conductive parts of the product directly. Doing so may cause device failures or malfunctions
- Connect special adapter securely to their designated connectors.
- Loose connections may cause malfunctions.

2.1 Connection to the FX3U Series PLC

Procedure

1) Turn off the nower

Disconnect all the cables connected to the PLC main unit and special adapter, and demount the main unit and special adapter mounted on DIN rail or mounted directly

2) Install an expansion board to the main unit.

For the expansion board installation procedure, refer to the following manual:

→ Refer to the FX3u Series User's Manual - Hardware Edition 3) Remove the special adapter connector cover on

the expansion board (fig.A). When connecting this product to another special adapter, please replace the 'expansion board' in the above description with a 'special adapter' and perform the procedure as indicated.

4) Slide the special adapter slide lock (fig.B) of the main unit.

When connecting this product to another special adapter, please replace the 'main unit' in the above description with a 'special adapter' and perform the procedure as indicated.

- 5) Connect the special adapter (fig.C) to the main unit as shown on the right
- 6) Slide back the special adapter slide lock (fig.B) of the main unit to fix the special adapter (fig C)

Connection precautions

Connect all the high-speed I/O special adapters before connecting other enecial adapters when they are used in combination

Do not connect a high-speed I/O special adapter on the left side of a communication or analog special adapter

2.2 Connection to the FX3UC (D. DSS) Series PLC

Procedure

Turn off the power.

Disconnect all the cables connected to the PLC, and demount the PLC from the DIM rail

- 2) Remove the special adapter connector cover (fig.A).
- 3) Slide the special adapter slide lock (fig.B) of the main unit.
- When connecting this product to another special adapter, please replace the 'main unit' in the above description with a 'special adapter' and perform the procedure as indicated

- 4) Connect the special adapter (fig.C) to the main unit as shown on the right.
- 5) Slide back the special adapter slide lock (fig.B) of the main unit to fix the special adapter (fig.C)

2.3 Connection to the FX3UC-32MT-LT(-2) Series PLC

→ For details, refer to the FX3UC Series User's Manual - Hardware Edition.

2.4 Connection to the FX3G Series PLC

Turn off the nower

Disconnect all the cables connected to the PLC, and demount the PLC from the DIN rail

2) Install a connector conversion adoptor to the main unit

For the connector conversion adopter installation procedure refer to the following manual

→ Refer to the FX3G Series User's Manual - Hardware Edition

3) Remove the special adapter connector cover when connecting this product to another special adapter Removal of the special adapter

connector cover is not required when connecting this product to the connector conversion adapter

4) Slide the special adapter slide lock (fig.A) of the connector conversion adanter

When connecting this product to another special adapter, please replace the 'connector conversion adapter' in the above description with a 'special adapter' and perform the procedure as indicated

6) Slide back the special adapter slide lock (fig.A) of the connecto conversion adapter to fix the special adapter (fig.B).

3. Wiring

WIRING DDECALITIONS

DANGER

 Make sure to cut off all phases of the power supply externally before attempting installation or wiring work. Failure to do so may cause electric shock or damage to the product.

WIRING PRECAUTIONS

ACAUTION

Make sure to cut off all phases of the power supply externally before attempting installation or wiring work.

Failure to do so may cause electric shock or damage to the product.

Make sure to observe the following precautions in order to prevent any damage to the machinery or accidents due to abnormal data written to the PLC under the influence of noise

1) Do not bundle the main circuit line together with or lay it close to the main circuit high-voltage line or load line

Otherwise, noise disturbance and/or surge induction are likely to take place. As a guideline, lay the control line at least 100mm (3.94") or more away from the main circuit or high-voltage lines.

2) Ground the shield wire or shield of the shielded cable at one point on the PLC. However, do not use common grounding with heavy electrical

Make sure to properly wire to the European terminal board in accordance with the following precautions.

Failure to do so may cause electric shock, a short-circuit, wire breakage, of damage to the product.

- The disposal size of the cable end should be 9mm (0.35").
- Tightening torque should be between 0.22 and 0.25N·m
- Twist the end of strand wire and make sure that there are no loose wires
- Do not solder-plate the electric wire ends.
- Do not connect more than the specified number of wires or electric wires of unspecified size
- Affix the electric wires so that neither the terminal block nor the connected parts are directly stressed.
- Make sure to properly wire to the FX3G/FX3U/FX3UC Series PLC accordance with the following precautions.

Failure to do so may cause electric shock, a short-circuit, wire breakage, of damage to the product.

- The disposal size of the cable end should follow the dimensions
- described in this manual
- Tightening torque should follow the specifications in this manual.

3.1 Applicable cable and terminal tightening torque

3 1 1 Terminal block (European type)

Wiring to analog device should use 20.22 AWC wire

2) Applicable cable

	Single-wire	0.3mm ² to 0.5mm ² (AWG22 to 20)
	2-wire	2 pieces of 0.3mm ² (AWG22)

2) Termination of cable and

Strip the coating of strand wire and twist the cable core before connecting it or strip the coating of single wire before connecting it.

An alternative connection is to use a ferrule with insulating sleeve

Manufacturer	Model	Pressure bonding tool
Phoenix Contact Co., Ltd.	AI 0.5-8WH	CRIMPFOX ZA 3 (or CRIMPFOX UD 6)

When using a stick terminal with insulating sleeve, choose a wire with proper cable sheath referring to the above outside dimensions, or otherwise, the wire cannot be inserted easily

The tightening torque must be 0.22 to 0.25N·m.

3.2 Power Supply Wiring

→ For the power supply wiring, refer to the FX3G / FX3U / FX3UC Series User's Manual - Analog Control Edition

3.3 Wiring of Analog Output

→ For the terminal configuration, refer to Section 1.2

V□+, I□+, ch □: □represents the channel number

- *1 Use 2-core shielded twisted pair cable for the analog output lines, and separate the analog output lines from other power lines or inductive lines
- *2 24V DC service power supply of the FX3G/FX3U Series PLC can also be used.
- *3 Ground the shielded wire at one point on the signal receiving side.

3.4 Grounding

Grounding should be performed as stated below

- The grounding resistance should be 100Ω or less.
- Independent grounding should be performed for best results

When independent grounding is not performed, perform "shared grounding" of the following figure → For details, refer to the FX3G Series User's

Shared grounding

Good condition

Common arounding

Not allowed

The grounding wire size should be AWG 22-20 (0.3-0.5 mm²).

Independent grounding

Best condition

 The grounding point should be close to the PLC, and all grounding wire should be as short as possible.

4.1 Applicable PLC		
Model name	Applicability	
FX3U Series PLC	Ver. 2.20 or later (from first production)	
FX3UC Series PLC	Ver. 1.20 or later (from the production manufactured in May, 2004 with SER No. 45^{****})	
FX3G Series PLC	Ver. 1.00 or later (from first production)	

The version number can be checked by monitoring D8001 as the last three digits

4.2 General Specifications

For the general specifications, refer to the manual of the PLC main unit. The items other than the following are equivalent to those of the PLC main unit.

Item	Specification	
Dielectric withstand voltage	500V AC for one minute	Conforming to JEM-1021 Between all terminals and
Insulation resistance	$5 \text{M}\Omega$ or more by 500V DC megger	ground terminal of PL0 main unit

1.5 1 Ower ouppry opecinications		
Item	Specification	
D/A conversion circuit driving power	24V DC +20%/-15%, 150mA for 24V DC Connect a 24V DC power supply to the terminal block.	
Interface driving power	5V DC, 15mA 5V DC power is supplied from the internal power supply of main unit.	

4.4 Performance Specifications

Item	Description	
item	Voltage output	Current output
Analog output range	0 to 10 V DC (External load: $5k\Omega$ to $1M\Omega$)	4 to 20mA DC (External load: 500Ω or less)
Digital input	12 bit	s, binary
Resolution	2.5mV(10V/4000)	4μA(16mA/4000)
Total accuracy	±0.5% (±50mV) for full scale of 10 V (when ambient temperature is 25°C±5 °C)	
	±1.0% (±100mV) for full scale of 10 V (when ambient temperature is 0°C to 55°C)	• ±0.5% (±80μA) for full scal of 16mA (when ambient temperature is 25°C±5°C) • ±1.0% (±160μA) for full scale of 16mA (when ambient temperature is 0°C to 55°C)
	If the external load resistance (Rs) is less than 5kΩ, the value calculated from the following formula will be added: (Addition will be 100mV per %.)	
	47×100 Rs+47 - 0.9(%)	
D/A conversion time	• FX3U/FX3UC Series PLC: 200 µs (The data will be updated at every scan time of the PLC.) • FX3G Series PLC: 250 µs (The data will be updated at every scan time of the PLC.)
